

Fig.1

A detailed technical drawing of a mechanical device, likely a conveyor or sorting system, shown in a side cross-sectional view. The device features a hinged lid at the top, which is tilted upwards. The lid is composed of several layers, with the top layer labeled 10 and the inner layer labeled 17. The lid is hinged to a frame, with the hinge mechanism labeled 6. The frame is supported by two vertical legs, labeled 2 and 7. The legs are connected by a horizontal bar, labeled 18. The device includes a series of rollers or wheels, labeled 4, 14, and 16, which are mounted on a horizontal shaft, labeled 9. The rollers are arranged in a row, and the shaft is supported by a frame, labeled 15. The entire device is mounted on a base, labeled 8. The drawing includes various dashed lines indicating internal components and the hinged nature of the lid.
